TO: **NOTE TO BIDDERS**

FROM: WDNR

SUBJECT: Olson Oil Co. Bulk Plant – La Farge

The pump house building which was formerly adjacent to highly contaminated soils in the area of HA-5 has been removed. During excavation, field screening of soils in the area of the former building shall be conducted. Remedial excavation and confirmation sampling shall extend to any areas of the former building where it is suspected, based on field screening, that highly contaminated soils are present in the upper four feet of soils. For purposes of this bid, bidders shall continue to assume the excavation and disposal of a total of 185 tons of soil, and to provide a contingency unit cost, as required in the bid document.

Bidders should be aware that this area of the site is currently used for semi truck parking. The contractor will be expected to coordinate with the property owner to ensure that backfilling of the excavation is adequate for the current land use. It is suggested that, at a minimum, the excavation be backfilled with a clean, low-permeability backfill, adequately compacted in six-inch lifts or less, while maintaining an optimum range of moisture content, and covered with gravel similar to that of the surrounding area.

**Please include a statement in your bid response that this statement has been read, and that you are aware of this change in circumstances at the Olson Oil Co. Bulk Plant site.**
